

# API Endpoints Documentation

This documentation covers the available API endpoints for products and admin accounts. Each endpoint supports multiple HTTP methods, which are described below.

## Product Endpoints'

`localhost/api/products/<int:pk>` `localhost/api/products/`

### 1. `/products/<int:pk>`

- **GET:** Retrieves the details of a specific product using its unique ID (`pk`).
- **DELETE:** Deletes a specific product using its unique ID (`pk`).
- **PATCH:** Updates specific fields of a product using its unique ID (`pk`).
- **POST:** Typically not used as POST is for creating resources and should be directed to `/products/`.

### 2. `/products/`

- **GET:** Retrieves a list of all products.

`localhost/admin/account/<str:username>/` `localhost/admin/account/`

## Admin Account Endpoints

### 5. `/admin/account/<str:username>/`

- **GET:** Retrieves the details of a specific admin account using the username.
- **DELETE:** Deletes a specific admin account using the username.
- **PATCH:** Updates specific fields of an admin account using the username.
- **POST:** Typically not used as POST is for creating resources and should be directed to `/admin/account/`.

### 6. `/admin/account/`

- **GET:** Retrieves a list of all admin accounts.
